1. 10G FTTH, 4x1000M Multi-Use broadband and 2500M FTTH services are bandwidth specifications. Bandwidth specification refers to network specifications of the services subscribed for the broadband line connected from the modem at a customer's premises to the first piece of NETVIGATOR network equipment or central office. For 10G FTTH services, bandwidth specification corresponds to a maximum downstream bandwidth of 10Gbps and maximum upstream bandwidth of 10Gbps. For 4x1000M Multi-Use broadband service, bandwidth specification corresponds to a maximum downstream bandwidth of 4Gbps and maximum upstream bandwidth of 2Gbps (by 4 passive optical network modem ports of up to 1Gbps each). VLAN (Virtual Local Area Network) technology for 4x1000M Multi-Use broadband service is disabled by default, unless the customer has requested NETVIGATOR to enable this technology. For 2500M FTTH service, bandwidth specification corresponds to a maximum downstream bandwidth of 2.5Gbps and maximum upstream bandwidth of 2.5Gbps. Actual speed experienced will be less than the network specifications and will be affected by the customer's device, technology, network and software used, network configuration and coverage, usage levels, international bandwidth and extraneous factors.
